Classic brazing rods Cat. No. GE163B

Reference: GE163B

Price: 39,59 € Excl. Tax 47,51 € Incl. Tax

Description

Classic brazing rods with 6.3% phosphorus!

Brazing is traditionally done with copper- and phosphorus-based rods, available with or without silver. The brazing temperature should be between 600 and 850°C.

The more silver the rod contains, the better the wetting properties and the easier it is to apply the material.

The specific advantages of this reference GE163B include its ideal design for soldering joints with large clearances of between 1 and 2 mm.

Our reference. GE163B is sold in one-kilo packs. Its design is square with a dimension of 2x2 mm for a rod length of 500 mm.

This reference GE163B offers basic fluidity and will find its place among sanitary plumbing professionals.

This product is available online and can be delivered to your door within 72 hours of receipt of payment.
