Classic brazing rods Cat. No. GE180B

Reference: GE180B

Price: 40,09 € Excl. Tax 48,11 € Incl. Tax

Description

Classic brazing rods with 8% phosphorus!

Brazing is traditionally done with copper- and phosphorus-based rods, available with or without silver. The brazing temperature should be between 600 and 850°C.

The more silver the rod contains, the better the wetting properties and the easier it is to apply the material.

The specific advantages of this reference GE180B include its ideal design for delicate assembly brazing with small clearances of less than 0.05 mm.

Our Ref. GE180B is sold in one kilo packs. Ø 2 mm - L 500 mm.

This reference GE180B offers high fluidity and will find its place among professionals in air conditioning, refrigeration and all those involved in fluid transport circuits.

Note that this product is available for sale online and can be delivered to you within 72 hours of receipt of your payment.
