Piezo burner Cat. No. 50TP

Reference: 50TP

Price: 93,42 € Excl. Tax 112,10 € Incl. Tax

Description

Made with titanium and aluminium, the new Guilbert Express range of titanium piezo burners does away with the need for professional roofers to use an external ignition source.

The burner can be lit with a single press on its piezo ignition. In addition to being handy for the user, this Express innovation increases work-site safety: easier ignition means it is no longer necessary for roofers to keep the tool in "pilot burner" mode, which has frequently been a source of fire outbreaks in the past.

This 50TP burner is part of a wide range with power from 50 to 150 kW, covering practically all situations encountered in conventional roofing jobs.

Providing 54 kW of power at 4 bar, and weighing just 130 g, this product is part of Guilbert Express' efforts to develop product solutions that reduce the risk of musculoskeletal disorders (MSDs) among roofing professionals.

As with all Express products, it is available exclusively at your regular Express dealer.
