Rubber hose Cat. No. 963/20SP

Reference: 963/20SP

Price: 91,79 € Excl. Tax 110,15 € Incl. Tax

Description

Flexible rubber hose (French standard NF EN ISO 3821), fitted with crimped left-hand female connectors and above all protected from breakages at the connection level thanks to this ingenious device tested on numerous waterproofing sites in France but also throughout Europe.

It is of course a hose for a butane propane torch in the gas phase, its primary purpose, but protected from breakages or tearing, the source of many incidents that were reported to us by some waterproofing professionals.

You should know that a torch hose is replaced every three years for intensive use and every five years after commissioning in other cases. But it often happened that the

operator was forced to replace his gas hose well before this deadline. Indeed, subjected to severe constraints on roofs where the hoses are often mishandled and dragged on the ground over long distances, it was urgent to find a solution that would allow increased safety during intervention.

This is how this reference 963/20SP was born, which, in addition to a classic length of 20 meters and a diameter of 6.3 mm compatible with all waterproofing torches, now offers a reinforced frame at the level of the crimped sleeve outlet connector.

When it's time to change hoses, the Express flexible rubber hose will do the job perfectly.

This reference can be delivered to you within 72 hours upon receipt of your payment.
